

LESSON NOTE 1

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: One

Topic: Definition and Meaning of IT in Everyday Life

Date: 28/04/2025

Duration: 40 Minutes

Learning Objectives: By the end of the lesson, students should be able to:

Define 'Information'.

Define 'Technology'.

Combine these to define 'Information Technology (IT)'.

Explain the basic meaning of IT in simple terms.

Identify at least 3 examples of IT tools used in everyday life.

Instructional Materials: Whiteboard/Chalkboard, Markers/Chalk, Pictures/Illustrations of IT devices (Computer, Phone, Tablet, ATM, TV), Textbook (if available).

References: List relevant textbook pages, e.g., Basic Computer Studies for JSS 1, Chapter X

Previous Knowledge: Students likely have some interaction with technology (phones, TV, maybe computers). Ask what tools they use to watch cartoons, talk to relatives far away, etc.

Introduction (5 mins):

Greet the class.

Ask engaging questions: "How do you get news?" "How do you learn new things?" "How do you talk to friends/family not living nearby?"

Briefly discuss their answers, highlighting the tools they mention (TV, phone, books, etc.).

Introduce the topic: "Today, we're going to learn about something that powers many of these tools: Information Technology, or IT."

BOARD SUMMARY (20-25)

Definition of Information: information is knowledge, facts, or data about something or someone (e.g., the time, news, a friend's phone number, lesson notes). Write definition on the board.

Definition of Technology: technology refers to tools, machines, and methods used to solve problems or make tasks easier (e.g., a pencil helps us write, a car helps us travel). Write definition.

Definition of Information Technology (IT): IT is the use of technology especially computers and telecommunications to create, store, process, retrieve, and send information. For example "Using tools like computers and phones to work with information."

IT in Everyday Life: IT helps us do things faster, easier, and connect with others. Use simple examples:

Finding information quickly with using Google.

Communicating easily with phone calls or messages.

Learning new things with educational apps or websites.

Entertainment with games or videos.

Examples of IT Tools: Show pictures or point out real objects (if available): Computer, Laptop, Tablet, Smartphone, ATM machine, Smart TV, Digital Camera. Briefly mention what each is used for in relation to information.

Student Activities (5-10 mins):

Ask students to name IT tools they see at home or school.

Think-Pair-Share: Ask students to discuss with a partner one way IT makes their life easier.

Evaluation/Assessment (5 mins):

Ask oral questions:

What is Information?

What is Technology?

What does IT stand for?

Can you name two IT tools?

How does IT help us?

Conclusion/Summary (2 mins):

Recap the definitions of Information, Technology, and IT.

Reiterate that IT is about using tools to manage information and is very important in our daily lives.

HomeFun:

Draw two IT tools you use or see often.

Write one sentence explaining what each tool helps you do with information.

LESSON NOTE 2

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Two

Topic: Application of IT in Everyday Life ¹

Sub-Topic: IT in Communication and Education

Date: 05/05/2025

Duration: 40 Minutes

Learning Objectives: By the end of the lesson, students should be able to:

Identify at least two ways IT is used for communication.

Identify at least two ways IT is used in education.

Explain briefly how tools like phones, email, and the internet help in communication and learning.

Instructional Materials: Whiteboard/Chalkboard, Markers/Chalk, Pictures/Illustrations (Email interface, Video call, Online learning platform, Students using tablets), Projector (optional), Computer with internet (optional, for demonstration).

References: Textbook pages, relevant websites like BBC Bitesize Computing

Previous Knowledge: Students know the basic definition of IT and can identify some IT tools (from Week 1). They use phones or see adults using them for calls/messages.

Introduction (5 mins):

Review: Ask "What is IT?" and "Name one IT tool."

Pose questions: "How did people send urgent messages long ago?" (Discuss letters, messengers). "How do we do it now?" (Phones, email). "How do you find information for your HomeFun?" (Books, internet).

Introduce the topic: "Today, we'll explore specific ways IT helps us in two important areas: Communication and Education."

BOARD SUMMARY (20-25 mins):

IT in Communication:

communication is the Sharing of information or ideas.

IT tools for communication: the following are IT tools used for communication, they are

Telephones/Smartphones: which we use For calls, SMS/text messages, video calls. they connect people instantly over distances.

Email: is an electronic mail/letters sent via the internet. it is used for formal messages.

Instant Messaging/Chat Apps: apps like WhatsApp - use real-time text conversations.

Advantages:

1. Fast
2. Convenient
3. connects people globally.

IT in Education: IT helps in learning and teaching.

IT tools/methods in education:

1. **Internet for Research:** Finding information on websites like Wikipedia (with caution), educational sites.
2. **E-learning Platforms/Apps:** Websites or apps with lessons, quizzes, videos (e.g., Google Classroom, Khan Academy, specific school platforms).
3. **Educational Software/Games:** Programs designed to teach specific subjects (math games, typing tutors).
4. **Computers/Tablets in Class:** For typing notes, presentations, accessing resources.

Advantages:

1. Access to vast information
2. Interactive learning
3. Learning at your own pace.

Student Activities (5-10 mins):

Brainstorm: List different ways students communicate using IT.

Discussion: Ask students if they have used computers or the internet for schoolwork and how it helped.

Evaluation/Assessment (5 mins):

Ask oral questions:

Name one IT tool used for communication. How does it help?

What is email?

Name one way IT is used in schools or for learning.

How can the internet help with HomeFun?

Conclusion/Summary (2 mins):

Summarize the key applications discussed: IT makes communication faster (phones, email, chat) and enhances learning (research, e-learning, educational software).

HomeFun:

List one advantage of using IT for communication.

List one advantage of using IT for education.

Ask your parents/guardians how they use IT for communication. Write down one example.

LESSON NOTE 3

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Three

Topic: Application of IT in Everyday Life ²

Sub-Topic: IT in Entertainment, Banking, and Health

Date: 12/05/2025

Duration: 40 Minutes

Learning Objectives: By the end of the lesson, students should be able to:

Identify at least two ways IT is used for entertainment.

Explain the function of an ATM as an IT application in banking.

Mention one way IT is used in hospitals or healthcare.

Appreciate the wide-ranging impact of IT in daily life.

Instructional Materials: Whiteboard/Chalkboard, Markers/Chalk, Pictures/Illustrations (Video game, Music streaming app, Movie streaming service interface, ATM, Hospital computer/scanner), Projector (optional).

References: Textbook pages, general knowledge resources

Previous Knowledge: Students understand IT basics and its use in communication and education (Weeks 1 & 2). They have likely experienced IT-based entertainment and seen ATMs.

Introduction (5 mins):

Review: Ask "How does IT help in communication?" "How does IT help in learning?"

Engage: Ask "What do you do for fun using phones or computers?" "Have you ever seen someone get money from a machine in a wall?" "Where do hospitals keep patient information?"

Introduce the topic: "IT isn't just for work and school! Today we'll see how it's used for fun (Entertainment), managing money (Banking), and keeping us healthy (Health)."

BOARD SUMMARY (20-25 mins)

IT in Entertainment:

Entertainment: is any activities we do for fun and relaxation.

IT applications:

Video Games: Played on computers, consoles (PlayStation, Xbox), phones, tablets.

Music/Video Streaming: Services like YouTube, Netflix, Spotify (use relevant local examples) allow watching/listening online.

Digital Photography/Video: Using phones/cameras to capture memories.

Social Media (mention briefly): Platforms used for connecting and sharing (e.g., Facebook, Instagram, TikTok - emphasize responsible use if mentioned).

Discuss Advantages: Wide variety of choices, accessible anywhere with internet.

IT in Banking:

bank is a safe place where we Keep our money and other valuable items safe, and we can take it out when we need it.

IT applications:

ATM (Automated Teller Machine): ATM is a machine that lets people withdraw cash, check balances by using a card and PIN.

Online/Mobile Banking: this it the Use of websites or apps to check money, pay bills without going to the bank.

Point of Sale (POS) Machines: this are mobile device Used in shops to pay for items or make payment with cards.

Advantages:

1. Convenience (24/7 access via ATM)
2. speed.

IT in Health:

healthcare.

IT applications:

Electronic Health Records (EHR): Hospitals use computers to store patient information safely and access it quickly.

Medical Equipment: Many diagnostic machines (like X-rays, Scans) use computers.

Telemedicine (mention simply): Consulting doctors online or via phone.

Discuss Advantages: Better record keeping, faster diagnosis support, access to specialists.

Student Activities (5-10 mins):

List favorite types of IT-based entertainment.

Draw a simple diagram showing someone using an ATM.

Discuss: How might computers help doctors or nurses in a hospital?

Evaluation/Assessment (5 mins):

Ask oral questions:

Name two ways IT is used for entertainment.

What does ATM stand for? What does it help us do?

Give one example of how IT is used in healthcare.

Conclusion/Summary (2 mins):

Recap the key applications discussed: IT provides entertainment (games, videos), makes banking easier (ATMs, online banking), and helps in healthcare (records, equipment). Emphasize that IT is everywhere!

HomeFun:

Draw one picture showing IT being used in either Entertainment, Banking, or Health. Label it.

Write one sentence about why IT is important in that area.

LESSON NOTE 4

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Four

Topic: Practical ¹

Sub-Topic: Exploring Basic IT Applications (Requires Computer Lab/Devices)

Date: 19/05/2025

Duration: 40 Minutes - Practical lessons often need more time

Learning Objectives: By the end of the lesson, students should be able to:

Power on and log in to their CBT dashboard, access a computer or tablet (with guidance).

Open and close a simple application like Paint, Notepad/TextEdit, and School computer practical CBT educational website.

Perform a very basic task within the application (type their name, draw a shape, navigate the CBT menu).

Practice safe and respectful use of equipment.

Instructional Materials: Functional Computers or Tablets (one per student or pair), Projector connected to teacher's computer, Whiteboard/Markers, List of simple tasks. Pre-installed simple software (Paint, Notepad/TextEdit) or a designated educational CBT website.

References: Basic computer operation guide and computer ethics.

Previous Knowledge: Students have learned *about* IT applications theoretically (Weeks 1-3). This is their chance for guided hands-on experience.

Introduction (10 mins):

Gather students in the computer lab or area with devices.

Review lab rules: No food/drink, handle equipment gently, follow instructions, ask for help.

Recap: Briefly mention the IT applications discussed (Communication, Education, Entertainment, Banking, Health).

Explain the goal: "Today, we get to *use* the computers/tablets to try out some very simple things, like the tools we've been learning about."

Demonstration (15 mins):

Powering On & Logging In: Teacher demonstrates how to correctly power on the computer/device. Explain the login process if applicable (using generic student accounts if set up). Project the steps via projector.

The Desktop/Home Screen: Briefly point out key elements (icons, taskbar/dock, start menu/app drawer).

Opening an Application: Demonstrate how to find and open a simple pre-chosen application (the Paint or Notepad). Explain clicking/tapping icons.

Basic Task Demonstration: the very basic task students will perform are how to select the text tool and type in Notepad, or select a brush and draw a line in Paint.

Closing an Application: Demonstrate how to close the application properly (using the 'X' button).

Powering Off (if required): Demonstrate the correct procedure for shutting down the computer.

Student Activities (45 mins - Guided Practice):

Students go to their assigned computer/device.

Task 1: Guide them step-by-step to power on and log in. Assist individuals as needed.

Task 2: Instruct them to find and open the chosen application ("Let's all open Paint"). Circulate and help.

Task 3: Give a simple, specific instruction:

Notepad/TextEdit: "Type your first name and press Enter. Then type 'Basic Seven Lavender'."

Paint: "Choose the brush tool. Choose your favorite color. Draw a simple shape like a circle or a square."

Educational website: "Open the Link with any browser and click on the 'login' button."

Allow exploration time within limits, encouraging them to try simple things shown.

Task 4: Guide them to logging out Their profile and close the application.

Task 5: Guide them through the shutdown procedure

Evaluation/Assessment (Ongoing Observation):

Observe students' ability to follow instructions.

Check if they can perform the basic tasks (opening app, simple input, closing app).

Note students needing significant extra help.

Ask simple check questions during the activity: "Show me how you open the app." "Where is the close button?"

Conclusion/Summary (10 mins):

Gather students' attention away from the screens.

Briefly review what they did: Turned on computer, opened program, did a small task, closed program, turned off computer.

Praise their efforts and good behaviour with the equipment.

Connect it back: "See? You just used IT tools to create something (text or drawing)!"

HomeFun:

Draw the computer screen and label the icon of the program they used today.

Write one thing they learned or found interesting during the practical session.

LESSON NOTE 5

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Five

Topic: Information Transmission ¹

Sub-Topic: Meaning and Importance; Ancient/Early Methods

Date: 26/05/2025

Duration: 40 Minutes

Learning Objectives: By the end of the lesson, students should be able to:

Define 'Information Transmission'.

Explain why transmitting information is important.

Identify at least three ancient/early methods of information transmission.

Describe one limitation of these early methods.

Instructional Materials: Whiteboard/Chalkboard, Markers/Chalk, Pictures/Illustrations (Town crier, Smoke signals, Drum beating, Cave paintings, Runner/messenger, Clay tablet/scroll).

References: Textbook pages, History websites/books on communication

Previous Knowledge: Students understand what information is (Week 1). They know IT helps communicate (Week 2).

Introduction (5 mins):

Review: Ask "What is information?"

Pose a scenario: "Imagine you discovered something important, like where to find fresh water, but you are far away from your village. How would you let them know?"

Lead into the topic: "Getting information from one place or person to another is called 'Transmission'. Today we'll learn about this and how people did it long, long ago."

BOARD SUMMARY (20-25 mins):

Define Information Transmission: this is the process of sending information from a source who is the sender to a destination who is the receiver. Use analogies: Like throwing a ball (the information) from one person to another.

Importance of Transmission: transmission is very crucial in the following ways:

1. Sharing news and warnings (danger, weather).

2. Giving instructions.
3. Coordinating activities (hunting, farming).
4. Passing down knowledge and stories.
5. Maintaining relationships (personal messages).

Ancient/Early Methods

1. **Oral (Word of Mouth):** Stories, news passed by speaking. Simple, but can change over time.
Messengers/Runners: People carrying verbal or written messages. Faster than just walking, but limited by human speed/endurance.
2. **Drum Beats:** Using patterns of sound to send coded messages over distances. Limited range, needs pre-arranged codes.
3. **Smoke Signals:** Using fire and smoke patterns. Visible over distance, but affected by weather, limited messages.
4. **Town Criers:** Shouting news in public places. Only reaches people nearby.
5. **Early Writing:** Symbols on cave walls, clay tablets, scrolls. Allows permanent record but slow to create and transport.

Limitations: the following were the common problems with these early methods

1. **Slow Speed:** Took a long time for messages to travel far.
2. **Limited Range/Reach:** Messages couldn't easily go very long distances.
3. **Lack of Privacy:** Everyone could hear a town crier or see smoke signals.
4. **Information Distortion:** Oral messages could change as they were retold.
5. **Dependence on Weather/Conditions:** Smoke signals need clear weather, runners can be delayed.

Student Activities (5-10 mins):

Matching Game: Match pictures of early methods with their names.

Discussion: Ask students to imagine sending a message using smoke signals — what problems might they face?

Draw: Ask students to draw one ancient method of sending information.

Evaluation/Assessment (5 mins):

Ask oral questions:

What does 'Information Transmission' mean?

Why is sending information important?

Name two ways people sent information long ago.

What was one problem with sending messages back then?

Conclusion/Summary (2 mins):

Recap the definition of information transmission and its importance.

Briefly list the early methods discussed (oral, drums, smoke, messengers, early writing).

Mention that next time, we'll look at newer methods that solved some of these problems.

HomeFun

1. Ask an older family member your parent or grandparent, how messages were sent when they were young before everyone had phones/internet. Write down what they said.
 2. List one advantage and one disadvantage of using a messenger to send information.
-
-

LESSON NOTE 6

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Six

Topic: Information Transmission ²

Sub-Topic: Traditional / Early Mechanical & Electrical Methods

Date: 02/06/2025

Duration: 40 Minutes

Learning Objectives:

- Identify postal system (letters) as a method of transmission.
- Identify the Telegraph as an early electrical method.
- Identify the Telephone as a key development for voice transmission.
- Identify Radio and Television as broadcast methods.
- Compare these methods briefly to ancient methods (speed, reach).

Instructional Materials: Pictures/Illustrations (Postman, Letter/Envelope, Telegraph machine, Morse code chart, Early Telephone, Radio set, Early Television).

BOARD SUMMARY

Postal System: this is the sending of written messages through letters or parcels physically via mail services. More organized than messengers, wider reach, but still relatively slow.

Telegraph: this is the sending of electrical signals over wires using codes like Morse code. Much faster than mail services, first near-instant long-distance communication. But it requires wires and trained operators.

Telephone: this is the Transmitting of human voice electrically over wires. Allowed real-time conversation. Revolutionized personal and business communication.

Radio: Transmitting sound like voice, music, wirelessly using radio waves to many receivers at once also known as broadcast. It Reached large audiences simultaneously.

Television: this is the Transmission of moving pictures and sound wirelessly as broadcast. Added visual element to mass communication.

Comparison: Note the increasing speed and reach they all cover compared to ancient methods.

Activities: Discuss pros/cons of letters vs. telephone calls.

Evaluation: Name the invention used for sending coded electrical signals. What device allowed voice transmission over wires? What do radio and TV broadcast?

HomeFun: Find out what Morse code is. Draw a symbol representing either Radio or Television.

LESSON NOTE 7

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Seven

Topic: Information Transmission³

Sub-Topic: Modern Methods¹ - The Internet and World Wide Web

Date: 09/06/2025

Duration: 40 Minutes

Learning Objectives:

Define the Internet as a global network of computers.

Define the World Wide Web (WWW) as a way to access information over the Internet using websites.

Identify websites and web browsers as tools for accessing information online.

Explain that the internet allows for fast, global information transmission.

Instructional Materials: Pictures/Diagrams (Global network illustration, Computer connected to the internet, Website screenshot, Web browser icons - Chrome, Firefox, Edge). Computer with internet access for demonstration (optional).

BOARD SUMMARY

The Internet: This is a huge network connecting millions of computers worldwide. Like a global system of roads for information. Allows computers to 'talk' to each other.

World Wide Web (WWW): this is a service *on* the Internet. It's a collection of webpages like documents linked together. Like our library, the book are organized in a way that we can find book easily by the subject and class we need. Let's take for instance that the Internet is the library building, WWW is the system for organizing and finding books the book for the Internet is known as webpages.

Websites: this is the Collections of related webpages (school website, news website). Accessed via a web address (URL).

Web Browsers: this is a Software used to view websites like our Chrome, Firefox, Safari, Edge. There are Like the 'car' we use to travel the internet 'roads' to visit 'websites'.

How it Transmits Information: text, pictures, videos can be sent quickly across the world via the internet.

Activities: Draw a simple diagram of computers connected globally. List names of web browsers. If possible, demonstrate accessing a simple, safe website (school website, weather site).

Evaluation: What is the Internet? What do we use to view websites? What does WWW stand for?

HomeFun: List two things you can do using the Internet and World Wide Web. Draw the icon of a web browser you have seen.

LESSON NOTE 8

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Eight

Topic: Information Transmission ⁴

Sub-Topic: Modern Methods ² - Email, Mobile Communication & Messaging

Date: 16/06/2025

Duration: 40 Minutes

Learning Objectives:

1. Describe Email as electronic mail sent over the internet.
2. Identify mobile phones (especially smartphones) as key devices for modern communication.
3. Explain SMS (Short Message Service) as text messaging on mobile phones.
4. Identify Instant Messaging (IM) / Chat Apps (e.g., WhatsApp) as tools for real-time text/media sharing.
5. Recognize that these methods allow fast, personal, and often mobile communication.

Instructional Materials: Pictures/Illustrations (Email interface, Smartphone showing SMS and Chat app, various mobile phone types).

BOARD SUMMARY

Email (Review/Expand): this is an Electronic messages sent between people using email addresses via the internet. Can include text, pictures, files. It is good for formal and informal communication.

1. **Mobile Phones:** these are Devices that allow communication wirelessly over long distances.
 - a. **Basic Phones:** are Primarily used for calls and SMS.
 - b. **Smartphones:** Like mini-computers; allow calls, SMS, internet access, apps, email, chat, photos, videos etc. Key tool for modern IT access.
2. **SMS (Text Messaging):** Sending short text messages between mobile phones using the cellular network. Quick and widely used.
 - a. **Instant Messaging (IM) / Chat Apps:** Applications like WhatsApp, Telegram, Messenger on smartphones and computers allowing real-time text conversations, group chats, sharing of photos, videos, voice notes using the internet. Very popular for social communication.

Key Features

1. Speed
2. convenience
3. mobility (can communicate on the go).

Activities: Compare Email vs. SMS vs. Chat apps (When would you use each?). Role-play sending a simple SMS message (conceptually). Discuss the parts of an email address (username @ domain).

Evaluation: What is email used for? What does SMS stand for? Name one popular chat app. What device combines phone, internet, and apps?

HomeFun: List one advantage of using a smartphone for communication compared to just a basic phone. Write down a fictional email address (e.g., studentname@email.com).

LESSON NOTE 9

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Nine

Topic: Information Transmission⁵

Sub-Topic: Comparing Methods; Factors Affecting Transmission

Date: 23/06/2025

Duration: 40 Minutes

Learning Objectives:

1. Compare different transmission methods (Ancient vs. Traditional vs. Modern) based on speed, reach, cost, and reliability.
2. Identify factors that can affect the quality or success of information transmission (e.g., distance, technology used, network congestion, interference).
3. Appreciate the evolution of information transmission.

Instructional Materials: Whiteboard/Markers, Comparison Chart template, Pictures representing different methods.

DISCUSSION CLASS

Comparison Chart: Create a simple chart on the board comparing methods across key features:

Method: (Smoke Signal, Letter, Telephone, Email, Chat App)

Speed: (Very Slow, Slow, Fast, Very Fast/Instant)

Reach: (Local, Regional, National, Global)

Cost (General): (Low/Free, Moderate, Can be costly) - Keep simple.

Reliability: (Low - affected by weather/errors, Moderate, High)

Fill this chart through discussion.

Factors Affecting Transmission:

Distance: Longer distances historically meant slower transmission. Modern tech largely overcomes this, but signals still take time.

Technology Used: Telegraph is faster than mail; Fiber optic internet is faster than dial-up. The medium matters (wires, airwaves, fiber optics).

Network Traffic/Congestion: Too many people using the internet at once can slow it down (like a traffic jam).

Interference: Physical obstructions (buildings for radio waves), weather (for satellite/radio), electrical noise can disrupt signals.

Equipment Quality: Old or faulty phones, computers, or network equipment can cause problems.

Evolution: we have gone far in the journey of transmission of information from slow, local methods to fast, global, digital transmission.

Activities: Group work: Assign groups different methods and have them rank them by speed/reach. Class discussion filling the comparison chart. Brainstorm things that might stop a phone call or internet from working properly.

Evaluation: Which is generally faster: sending a letter or sending an email? What does 'global reach' mean? Name one factor that can slow down internet speed.

HomeFun:

1. Choose one ancient method and one modern method of information transmission, and draw it in a white cardboard paper
2. Write

a	short	note	comparing	their	speed.
---	-------	------	-----------	-------	--------

LESSON NOTE 10

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Ten

Topic: Practical ²

Sub-Topic: Simulating or Demonstrating Information Transmission (Requires Computer Lab/Devices)

Date: 30/06/2025

Duration: e.g., 80 Minutes

Learning Objectives: By the end of the lesson, students should be able to:

1. Use a simple tool to simulate sending a message electronically (safe email practice, controlled chat simulation,

and simple network message tool).

2. Observe the process of sending and receiving.
3. Understand that digital information travels quickly between connected devices.
4. Reinforce online safety rules when using live internet tools.

Instructional Materials: Functional Computers or Tablets with internet/network access, Projector, Whiteboard/Markers. Options for activity:

Option A (Email): Pre-set up safe student email accounts (if school policy allows & supervised) or use a dedicated educational email simulator.

Option B (Chat): Use a very simple, closed online chat tool for education, or a LAN messaging tool if available (sends messages only within the local network).

Option C (Shared Document): Use a collaborative tool like Google Docs where students can see others type in near real-time.

Option D (Network Simulation): Use educational software that simulates network transmission.

References: Tool-specific guides, Online safety guidelines (Computer Ethics).

Previous Knowledge: Students have learned about various modern transmission methods (Email, Chat, Internet - Weeks 7-9). They have basic computer operation skills (Week 4).

Introduction (10 mins):

Step 1: Review lab rules and online safety (Be respectful, don't share personal info, tell teacher if anything is strange or uncomfortable).

Step 2: Remind students of modern methods like Email and Chat.

Step 3: Explain the goal that Today, we will use the computers to practice sending and receiving simple messages electronically, like we learned about. and explain *which* tool they will use either Email simulator, chat tool, or LMS.).

Demonstration (15 mins):

Teacher demonstrates the specific tool/activity chosen:

How to open the tool/website.

How to compose a simple message (e.g., "Hello from Student Name").

How to specify the recipient (e.g., teacher's email, another student in a controlled environment, or just a 'send' button in a simulator).

How to click 'Send'.

How to check for received messages (Inbox or message window).

Emphasize the speed: "Notice how quickly the message arrives compared to sending a letter!"

Practical/Student Activities (45 mins - Guided Practice):

Students log in/access devices.

Guide them step-by-step to open the chosen tool.

Task 1: Instruct them to compose a simple, specific message (e.g., "My favorite subject is Computer").

Task 2: Guide them on how to address/send it (to the teacher, a designated partner if safe & managed, or just hit 'send' in a simulator).

Task 3: Guide them on how to check if they received a message (teacher might send a broadcast reply, or partners reply if set up).

Allow them to send 1-2 more simple, appropriate practice messages under supervision.

Monitor closely for appropriate use and assist individuals.

Evaluation/Assessment (Ongoing Observation):

Observe if students can navigate the tool to compose, send, and view messages.

Check their understanding of the send/receive concept.

Assess adherence to safety/lab rules.

Conclusion/Summary (10 mins):

Gather students' attention.

Discuss their experience: Was it easy? Was it fast?

Reinforce the concept: "You just used modern technology (IT) to transmit information quickly!"

Briefly reiterate online safety rules.

Ensure all students have logged off/shut down properly.

HomeFun:

Draw a simple diagram showing a message going from your computer/phone, through the internet (draw a cloud), to a friend's computer/phone.

Write one rule for staying safe when sending messages online.

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Eleven

Topic: Revision

Date: 07/07/2025

Duration: 40 Minutes

Learning Objectives: By the end of the lesson, students should be able to:

Recall key definitions and concepts covered during the term.

Answer questions related to IT definitions, applications, and information transmission methods.

Identify areas they need to focus on for the upcoming examination.

Instructional Materials: Whiteboard/Chalkboard, Markers/Chalk, Revision questions list, Past notes/worksheets. Maybe flashcards or a simple quiz game format.

Content Outline: Review key topics systematically:

Week 1: Definition of Information, Technology, IT. Examples of IT tools.

Weeks 2-3: Applications of IT (Communication - phone, email, chat; Education - research, e-learning; Entertainment - games, streaming; Banking - ATM; Health - records).

Week 5: Definition of Information Transmission, Importance, Ancient Methods (Oral, Drums, Smoke, Messengers). Limitations.

Week 6: Traditional Methods (Postal, Telegraph, Telephone, Radio, TV). Improvements.

Weeks 7-8: Modern Methods (Internet, WWW, Websites, Browsers, Email, Mobile Phones, SMS, Chat Apps).

Week 9: Comparing Methods (Speed, Reach, Cost, Reliability), Factors affecting transmission.

Practicals (Weeks 4 & 10): Briefly recall the *purpose* of the practicals (using basic apps, simulating message sending).

Activities:

Q&A Session: Ask targeted questions covering all topics.

Quick Quiz: Short written or oral quiz.

Concept Mapping: Create a mind map on the board connecting key terms.

Student Questions: Allow students to ask questions about topics they find difficult.

Review Game: Simple Jeopardy or team quiz based on the term's topics.

Evaluation: Assess student participation, answers to questions, and identify common areas of weakness.

HomeFun: Study all notes and HomeFuns from the term in preparation for the examination. Complete any provided revision worksheet.

LESSON NOTE 12

Class: Basic Seven Lavender

Term: Third Term

Subject: Computer Studies

Week: Twelve

Topic: Examination

Date:

Duration: As per Examination Timetable

Learning Objectives: To assess students' understanding of the concepts and skills taught throughout the Third Term Computer Studies curriculum.

Instructional Materials: Examination question papers, Answer sheets/booklets, Pens/Pencils.

BASIC SEVEN LAVENDER – THIRD TERM COMPUTER STUDIES EXAMINATION

SECTION A: THEORY (Answer all questions)

1. Define the following terms:
 - (a) Information
 - (b) Technology
 - (c) Information Technology (IT)
 2. List two ways IT is applied in Education and two ways it is applied in Entertainment.
 3. Explain briefly how an Automated Teller Machine (ATM) is an application of IT in Banking.
 4. What is Information Transmission? State two reasons why transmitting information is important.
 5. List three ancient methods of information transmission and state one general limitation they shared.
 6. Briefly describe how the invention of the Telephone improved information transmission compared to sending letters.
 7. Explain the difference between the Internet and the World Wide Web (WWW).
 8. State one main difference between SMS (Short Message Service) and an Instant Messaging (Chat) App.
 9. Compare sending a message via Smoke Signals and sending an Email in terms of **Speed** and **Reach**.
 10. Mention three factors that can affect the successful transmission of information using modern technology (like the internet or mobile phones).
-
-

SECTION B: OBJECTIVE (Answer all questions)

- | | |
|--|---|
| 1. Facts, data, or knowledge about something or someone is called _____. | (A) Technology
(B) Computer
(C) Information |
|--|---|

- (D) Network
(E) Transmission
2. Tools, machines, and methods used to solve problems or make tasks easier are known as _____.
(A) Information
(B) Technology
(C) Data
(D) Internet
(E) Software
3. What does IT stand for?
(A) Information Transfer
(B) Internet Technology
(C) Information Technology
(D) Internal Technique
(E) Important Telegram
4. Which of the following is an example of an IT tool used in everyday life?
(A) Hoe
(B) Smartphone
(C) Bicycle
(D) Cooking Pot
(E) Broom
5. IT mainly involves using technology to create, store, process, and _____ information.
(A) Destroy
(B) Hide
(C) Send/Transmit
(D) Eat
(E) Forget
6. Using Google to find information for homework is an application of IT in _____.
(A) Banking
(B) Entertainment
(C) Health
(D) Education
(E) Farming
7. Which IT application allows for instant voice communication over long distances?
(A) Email
(B) Telephone/Mobile Phone Call
(C) Postal Letter
(D) Smoke Signal
(E) Town Crier
8. Sending electronic letters over the internet is done using _____.
(A) Radio
(B) Television
(C) ATM
(D) Email
(E) Fax Machine
9. E-learning platforms are primarily used for _____.
(A) Playing complex video games
(B) Withdrawing cash
(C) Online education and learning
(D) Broadcasting music
(E) Sending smoke signals
10. Which of these is an application of IT in communication?
(A) Using a calculator
(B) Playing a video game
(C) Making a video call
(D) Using a digital thermometer
(E) Watching TV news
11. Playing games on a computer or tablet is an example of IT used for _____.
(A) Banking
(B) Education
(C) Health
(D) Communication
(E) Entertainment
12. Services like Netflix or YouTube use IT to provide _____.
(A) Banking services
(B) Health records
(C) Video streaming entertainment
(D) Educational degrees
(E) Postal services
13. What does ATM stand for?
(A) Automatic Teaching Machine
(B) Automated Teller Machine
(C) Applied Technology Method
(D) Associated Transmission Module
(E) Any Time Mail
14. ATMs are commonly used for _____.
(A) Sending emails
(B) Researching school projects
(C) Withdrawing cash from a bank account

- (D) Playing music
(E) Broadcasting news
15. Storing patient information on computers in hospitals is an application of IT in _____.
(A) Entertainment
(B) Banking
(C) Communication
(D) Health
(E) Transportation
16. Online banking allows users to _____.
(A) Watch movies
(B) Manage their bank accounts via the internet
(C) Diagnose illnesses
(D) Learn programming
(E) Send smoke signals
17. Which of these might use IT in healthcare?
(A) Town crier
(B) Drum beats
(C) Electronic Health Records (EHR)
(D) Postal service
(E) Smoke signals
18. Which is NOT primarily an entertainment application of IT?
(A) Video Games
(B) Music Streaming
(C) Online Banking App
(D) Movie Streaming
(E) Digital Photography
19. The main purpose of the first practical lesson (Practical 1) was likely to _____.
(A) Learn advanced programming
(B) Design a website
(C) Become familiar with basic computer operation and simple applications
(D) Repair computer hardware
(E) Send international mail
20. Opening an application like 'Notepad' or 'Paint' involves interacting with the computer's _____.
(A) Hardware only
(B) Software
(C) Power cable
(D) Network router
(E) Monitor screen only
21. The process of sending information from a source to a destination is called _____.
(A) Information Processing
(B) Information Storage
(C) Information Retrieval
(D) Information Transmission
(E) Information Deletion
22. Transmitting information is important for all the following reasons EXCEPT _____.
(A) Sharing news and warnings
(B) Giving instructions
(C) Keeping information secret from everyone
(D) Passing down knowledge
(E) Coordinating activities
23. Which of the following is an ancient method of information transmission?
(A) Email
(B) Telephone
(C) Smoke Signals
(D) Radio
(E) Television
24. Using drum beats to send coded messages is an example of _____ transmission.
(A) Modern digital
(B) Early electrical
(C) Ancient
(D) Satellite
(E) Internet-based
25. A person shouting news in public places long ago was called a _____.
(A) Webmaster
(B) Telegraph Operator
(C) Town Crier
(D) Radio Announcer
(E) Postman
26. A major limitation of most ancient information transmission methods was _____.
(A) They were too fast
(B) They had global reach
(C) They were very reliable in all weather
(D) They were often slow and had limited range
(E) They used advanced electronics
27. Which ancient method involved people

- physically carrying messages?
- (A) Smoke signals
 - (B) Drum beats
 - (C) Messengers/Runners
 - (D) Cave paintings
 - (E) Radio waves
28. Writing on clay tablets or scrolls was an early form of _____ information transmission.
- (A) Oral
 - (B) Written
 - (C) Electrical
 - (D) Broadcast
 - (E) Wireless
29. Which method improved on messengers by offering a more organized system for sending written documents?
- (A) Telegraph
 - (B) Telephone
 - (C) Postal System (Mail)
 - (D) Radio
 - (E) Smoke Signals
30. The Telegraph transmitted information using _____.
- (A) Sound waves through the air
 - (B) Written letters carried by birds
 - (C) Electrical signals over wires
 - (D) Light signals through fiber optics
 - (E) Smoke patterns
31. What code was famously used with the Telegraph?
- (A) Binary Code
 - (B) Morse Code
 - (C) HTML Code
 - (D) Secret Agent Code
 - (E) Bar Code
32. Alexander Graham Bell is credited with inventing the _____.
- (A) Radio
 - (B) Television
 - (C) Computer
 - (D) Telephone
 - (E) Telegraph
33. The invention of the telephone allowed for the transmission of _____ over wires.
- (A) Only coded signals
 - (B) Human voice
 - (C) Moving pictures
 - (D) Large data files
 - (E) Radio waves
34. Radio transmits information _____.
- (A) Only through wires
 - (B) Using smoke signals
 - (C) Wirelessly using radio waves
 - (D) Via the postal service
 - (E) Through clay tablets
35. Radio and Television are known as _____ methods because they send information to many receivers at once.
- (A) Point-to-point
 - (B) Secret
 - (C) Broadcast
 - (D) Ancient
 - (E) Slow
36. Which invention added moving pictures to sound for mass communication?
- (A) Telegraph
 - (B) Telephone
 - (C) Radio
 - (D) Television
 - (E) Postal System
37. Compared to ancient methods, the telegraph and telephone offered significantly improved _____.
- (A) Portability
 - (B) Speed
 - (C) Use of smoke
 - (D) Silence
 - (E) Environmental friendliness
38. A global network connecting millions of computers worldwide is called the _____.
- (A) World Wide Web
 - (B) Post Office
 - (C) Telegraph System
 - (D) Internet
 - (E) Telephone Exchange
39. WWW stands for _____.
- (A) World Wrestling Web
 - (B) Wide World Web
 - (C) World Wide Web

- (D) Western World Web
(E) Wired Web World
40. The World Wide Web is a system for accessing information _____ the Internet.
(A) Instead of
(B) Over
(C) Separate from
(D) Older than
(E) Without using
41. Collections of linked web pages with a common theme or purpose are called _____.
(A) Browsers
(B) Modems
(C) Websites
(D) Emails
(E) Internets
42. Software used to view websites, such as Chrome, Firefox, or Edge, is called a _____.
(A) Web Server
(B) Web Browser
(C) Web Page
(D) Web Link
(E) Web Host
43. To visit a specific website, you usually type its address, also known as the _____.
(A) IP Number
(B) Postal Code
(C) URL (Uniform Resource Locator)
(D) Browser Name
(E) Email Address
44. The Internet allows for _____ transmission of information like text, pictures, and videos globally.
(A) Very slow
(B) Fast
(C) Physical
(D) Smoke-based
(E) Manual
45. Which of these is essential for accessing the World Wide Web?
(A) A Telegraph machine
(B) A Radio transmitter
(C) An Internet connection and a Web browser
(D) Smoke signals kit
(E) A postal address
46. Electronic mail sent over the internet is commonly called _____.
(A) Snail Mail
(B) Telegram
(C) Email
(D) Fax
(E) Postcard
47. To send and receive email, you need an _____.
(A) ATM card
(B) Email address
(C) Radio frequency
(D) Television set
(E) Postal stamp
48. Which device combines calling, texting, internet access, and apps in one unit?
(A) Basic Mobile Phone
(B) Telegraph
(C) Radio
(D) Smartphone
(E) Landline Telephone
49. What does SMS stand for?
(A) Super Message System
(B) Short Mail Service
(C) Simple Messaging Software
(D) Short Message Service
(E) Send Mail Swiftly
50. SMS is commonly known as _____.
(A) Email
(B) Video Calling
(C) Text Messaging
(D) Web Browsing
(E) File Transfer
51. Apps like WhatsApp or Telegram are examples of _____.
(A) Web Browsers
(B) Operating Systems
(C) Instant Messaging (Chat) Apps
(D) Word Processors
(E) Antivirus Software
52. Instant Messaging apps primarily use the _____ to send messages.
(A) Postal service

- (B) Telegraph network
 - (C) Internet
 - (D) Radio waves directly
 - (E) Smoke signals
53. Compared to SMS, chat apps often allow for easier sharing of _____ in addition to text.
- (A) Only phone numbers
 - (B) Bank account details
 - (C) Photos, videos, and voice notes
 - (D) Secret codes
 - (E) Postal addresses
54. A key advantage of mobile communication (phones, SMS, chat apps) is _____.
- (A) It only works indoors
 - (B) Mobility - communicating on the go
 - (C) It is very slow
 - (D) It requires large machines
 - (E) It uses paper
55. Which modern method is generally best for sending formal written communication electronically?
- (A) SMS
 - (B) Chat App
 - (C) Email
 - (D) Smoke Signal
 - (E) Town Crier
56. In comparing transmission methods, 'Reach' refers to _____.
- (A) How fast the message travels
 - (B) How far the message can successfully travel
 - (C) How much the message costs to send
 - (D) How reliable the message delivery is
 - (E) How loud the message is
57. Which of these generally has the fastest transmission speed?
- (A) Postal Mail
 - (B) Town Crier
 - (C) Email
 - (D) Messenger Pigeon
 - (E) Smoke Signal
58. Which of these has a truly global reach?
- (A) Drum Beats
 - (B) Smoke Signals
 - (C) Town Crier
 - (D) Internet-based communication (Email, WWW)
 - (E) Early Telegraph network (limited)
59. The reliability of smoke signals was heavily dependent on _____.
- (A) Electricity
 - (B) Computer networks
 - (C) Weather conditions
 - (D) Availability of paper
 - (E) Telephone lines
60. Which factor can slow down internet transmission speed?
- (A) Clear weather
 - (B) Network Congestion (too many users)
 - (C) Using a new computer
 - (D) Having a strong signal
 - (E) Reading a book offline
61. Physical obstructions like buildings can cause _____ for radio or mobile phone signals.
- (A) Speed increase
 - (B) Interference
 - (C) Lower cost
 - (D) Better reliability
 - (E) Global reach
62. The evolution of information transmission shows a general trend towards _____.
- (A) Slower speeds and local reach
 - (B) Faster speeds and global reach
 - (C) Using more smoke and drums
 - (D) Less reliance on technology
 - (E) Making communication more expensive
63. Comparing ancient and modern methods, modern IT offers significant advantages in _____.
- (A) Simplicity only
 - (B) Speed, reach, and reliability
 - (C) Using natural elements only
 - (D) Being understandable without learning
 - (E) Costing absolutely nothing
64. Faulty equipment (like an old modem or damaged cable) can negatively affect _____.
- (A) The speed of light
 - (B) The weather

- (C) Information transmission quality
(D) The invention of the telephone
(E) The use of town criers
65. The purpose of the second practical lesson (Practical ²) was likely to _____.
(A) Learn ancient history
(B) Build a physical telephone
(C) Experience sending/receiving messages electronically (e.g., email/chat simulation)
(D) Study weather patterns
(E) Draw maps
66. Sending a message using an email simulator demonstrates the _____ of modern transmission.
(A) Slow nature
(B) Use of smoke
(C) Speed and electronic nature
(D) Need for paper
(E) Reliance on drums
67. Online safety rules are important when using tools like email or chat to _____.
(A) Make messages slower
(B) Protect personal information and avoid risks
(C) Ensure messages are written on paper
(D) Help signals travel further
(E) Learn Morse code
68. When comparing Email and Postal Mail, Email is significantly _____.
(A) Slower
(B) Faster
(C) More physical
(D) Older
(E) Less reliable
69. The Internet acts like a _____ for digital information transmission.
(A) Physical messenger
(B) Smoke signal fire
(C) Global highway or network
(D) Town crier's bell
(E) Set of drums
70. Which technology directly led to broadcast (one-to-many) transmission of sound?
(A) Telegraph
(B) Telephone
(C) Radio
(D) Postal System
(E) Email
71. Which application of IT would a student use to type a school report?
(A) ATM Machine
(B) Word Processor (like MS Word, Google Docs)
(C) Music Streaming App
(D) Video Game
(E) Web Browser only
72. Which transmission method requires a pre-arranged code between sender and receiver?
(A) Telephone Call
(B) Face-to-face conversation
(C) Telegraph (using Morse Code)
(D) Modern Email
(E) Postal Letter
73. A limitation of early radio and television was _____.
(A) They were silent
(B) They only transmitted text
(C) They were primarily one-way transmissions (broadcast)
(D) They required users to beat drums
(E) They were slower than mail
74. Which term relates to the accuracy and dependability of message delivery?
(A) Speed
(B) Reach
(C) Cost
(D) Reliability
(E) Medium
75. Which method transmits information as light pulses through thin strands of glass?
(A) Copper wire telephone lines
(B) Radio waves
(C) Fiber Optic cables (used for high-speed internet)
(D) Smoke signals
(E) Drum beats
76. Keeping electronic health records (EHR) offers advantages over paper records, such as _____.
(A) Telegraph

- (A) Being easily lost
 - (B) Taking up more physical space
 - (C) Easier access and sharing between authorized doctors
 - (D) Being impossible to back up
 - (E) Requiring smoke signals to read
77. Using a computer lab requires following rules primarily to _____.
- (A) Make the computers run slower
 - (B) Ensure equipment is used safely and respectfully
 - (C) Practice sending smoke signals
 - (D) Test the fire alarm
 - (E) Learn how to use a typewriter
78. Which of these is NOT directly related to Information Transmission?
- (A) Sending an SMS
 - (B) Making a phone call
 - (C) Browsing a website
 - (D) Reading a book silently to yourself
 - (E) Sending an email
79. The development from Telegraph to Telephone to Mobile Phones shows _____.
- (A) A decrease in communication options
 - (B) An increase in the complexity and capability of communication technology
 - (C) A return to ancient methods
 - (D) That communication always gets slower
 - (E) That wires are no longer used for anything
80. Overall, Information Technology (IT) has drastically changed _____.
- (A) Only the way we bank
 - (B) Only the way we learn
 - (C) Only the way we play games
 - (D) Almost every aspect of modern life, including communication and access to information
 - (E) The way smoke signals work

SECTION B: OBJECTIVE ANSWERS

- 1. (C). Information
- 2. (B). Technology
- 3. (C). Information Technology
- 4. (B). Smartphone
- 5. (C). Send/Transmit
- 6. (D). Education
- 7. (B). Telephone/Mobile Phone Call
- 8. (D). Email
- 9. (C). Online education and learning
- 10. (C). Making a video call
- 11. (E). Entertainment
- 12. (C). Video streaming entertainment
- 13. (B). Automated Teller Machine
- 14. (C). Withdrawing cash from a bank account
- 15. (D). Health
- 16. (B). Manage their bank accounts via the internet
- 17. (C). Electronic Health Records (EHR)
- 18. (C). Online Banking App
- 19. (C). Become familiar with basic computer operation and simple applications
- 20. (B). Software
- 21. (D). Information Transmission
- 22. (C). Keeping information secret from everyone
- 23. (C). Smoke Signals
- 24. (C). Ancient
- 25. (C). Town Crier
- 26. (D). They were often slow and had limited range
- 27. (C). Messengers/Runners
- 28. (B). Written
- 29. (C). Postal System (Mail)
- 30. (C). Electrical signals over wires
- 31. (B). Morse Code
- 32. (D). Telephone
- 33. (B). Human voice
- 34. (C). Wirelessly using radio waves
- 35. (C). Broadcast

36. (D). Television
37. (B). Speed
38. (D). Internet
39. (C). World Wide Web
40. (B). Over
41. (C). Websites
42. (B). Web Browser
43. (C). URL (Uniform Resource Locator)
44. (B). Fast
45. (C). An Internet connection and a Web browser
46. (C). Email
47. (B). Email address
48. (D). Smartphone
49. (D). Short Message Service
50. (C). Text Messaging
51. (C). Instant Messaging (Chat) Apps
52. (C). Internet
53. (C). Photos, videos, and voice notes
54. (B). Mobility - communicating on the go
55. (C). Email
56. (B). How far the message can successfully travel
57. (C). Email
58. (D). Internet-based communication (Email, WWW)
59. (C). Weather conditions
60. (B). Network Congestion (too many users)
61. (B). Interference
62. (B). Faster speeds and global reach
63. (B). Speed, reach, and reliability
64. (C). Information transmission quality
65. (C). Experience sending/receiving messages electronically (e.g., email/chat simulation)
66. (C). Speed and electronic nature
67. (B). Protect personal information and avoid risks
68. (B). Faster
69. (C). Global highway or network
70. (C). Radio
71. (B). Word Processor (like MS Word, Google Docs)
72. (C). Telegraph (using Morse Code)
73. (C). They were primarily one-way transmissions (broadcast)
74. (D). Reliability
75. (C). Fiber Optic cables (used for high-speed internet)
76. (C). Easier access and sharing between authorized doctors
77. (B). Ensure equipment is used safely and respectfully
78. (D). Reading a book silently to yourself
79. (B). An increase in the complexity and capability of communication technology
80. (D). Almost every aspect of modern life, including communication and access to information
