

PHYSICAL AND HEALTH EDUCATION LESSON NOTES

CLASS: BASIC EIGHT TULIP

TERM: THIRD TERM

YEAR: Academic Section of 2024/2025

WEEK 1

Date: 28/04/2025

Period:

Duration: 40 Minutes

Topic: Personal, School, and Community Health

Subtopic: Meaning and Components of School Health Program (SHP)

Reference Materials: Recommended PHE Textbook(s) for Basic 8, Charts, Online Resources.

Instructional Materials: Whiteboard/Marker, Chart showing Components of SHP, Pictures depicting healthy/unhealthy school environments.

Instructional Objectives: By the end of the lesson, students should be able to:

1. Define Personal Health, School Health, and Community Health in simple terms.
2. Define School Health Program (SHP).
3. List at least four components of a School Health Program.
4. Explain the importance of a School Health Program.

Previous Knowledge: Students have basic knowledge of personal hygiene (brushing teeth, bathing).

Introduction (5 mins):

- Greet students and briefly review the importance of staying healthy.
- Ask questions: "What do you do every day to keep yourself clean and healthy?" (Personal Health). "What makes our school a healthy place to learn?" (School Health). "What makes our neighbourhood/town healthy?" (Community Health).
- Introduce the main topic: School Health Program.

BOARD SUMMARY (25 mins):

- **Definition of Key Terms:**
 1. **Personal Health:** Can be defined as the taking care of one's own body and mind (hygiene, diet, exercise, rest).
 2. **School Health:** can be defined as the activities and conditions within the school environment that protect and promote the health of students and staff.
 3. **Community Health:** can be defined as the health status of a defined group of people and the actions and conditions to protect and improve their health.
- **Define of School Health Program (SHP):** SHP is an organized set of policies, procedures, and activities designed to protect and promote the health and well-being of students and school staff.

- **Components of SHP (Use Chart/Visual Aid):**
- **The following are some components of school health programme and they are as follows:**
 1. **Healthful School Environment:** this is the provision of Safe buildings, clean water, proper sanitation (toilets), adequate lighting/ventilation, waste disposal.
 2. **School Health Services:** it's function is to provide Health screening for the eyes and ears, first aid, managing sick students, immunization checks, referrals.
 3. **School Health Education:** the school should be able to teach students about health topics like hygiene, nutrition, diseases, safety.
 4. **School Nutrition Services:** the school should provide healthy meals/snacks if applicable, and nutrition education.
 5. **Physical Education & Activity:** Planned lessons and opportunities for physical activity.
 6. **Counselling, Psychological & Social Services:** Support for students' mental and emotional well-being.
 7. **Staff Health Promotion:** Programs to keep teachers and other staff healthy.
 8. **Family & Community Involvement:** Linking the school's health efforts with parents and the wider community.

- **Importance of SHP:** the following are why SHP is vital
- healthy students learn better
- reduced absenteeism
- prevention of disease spread
- creating lifelong healthy habits.

Evaluation (5 mins):

- Ask students to define SHP.
- Ask students to list three components of SHP discussed.
- Ask: "Why is it important for our school to have a good health program?"

Summary/Conclusion (3 mins):

- Recap the definitions and components of the School Health Program. Emphasize that everyone (students, staff, parents) plays a role in school health.

Assignment (2 mins):

- Write down two things that make your school environment healthy.

WEEK 2

Date: 06/05/2025

Period:

Duration: 40 Minutes

Topic: Environmental Pollution

Subtopic: Types of Environmental Pollution

Reference Materials: Recommended PHE Textbook(s), Environmental science resources, Online articles/videos.

Instructional Materials: Whiteboard/Marker, Pictures/Short Videos showing Air, Water, Land, and Noise Pollution, Chart listing types and sources.

Instructional Objectives: By the end of the lesson, students should be able to:

1. Define Environmental Pollution.
2. Identify and list four major types of environmental pollution.
3. Mention at least one source/cause for each type of pollution listed.

Previous Knowledge: Students understand the basic components of the environment (air, water, land).

Introduction (5 mins):

- Show contrasting pictures: a clean, beautiful natural scene vs. a polluted area (smoky factory, littered riverbank, garbage dump).
- Ask students: "What differences do you observe? What makes the second picture look unhealthy or dirty?"
- Introduce the term "Pollution".

BOARD SUMMARY (25 mins):

- **Environmental Pollution:** is the introduction of harmful substances or contaminants into the natural environment, causing adverse changes. It makes the environment dirty, unsafe, or unfit for living things.
- **Types of Pollution:**
 1. **Air Pollution:** This is the Contamination of the air by harmful gases, dust, smoke.
 - *Sources of air pollution:*
 - Smoke from factories
 - Vehicle exhaust
 - Burning of waste/bush
 - Dust storms.
 2. **Water Pollution:** this is the contamination of water bodies like rivers, lakes, oceans, groundwater e.t.c by harmful substances.
 - *Sources of water pollution:*
 - Sewage disposal
 - industrial waste
 - oil spills
 - dumping garbage in water
 - agricultural runoff (pesticides, fertilizers).
 3. **Land (Soil) Pollution:** this is the Degradation of land surface due to dumping of waste and misuse of soil.

- *Sources of soil pollution :*
- Improper disposal of solid waste (plastics, metals)
- industrial waste dumping
- deforestation
- excessive use of pesticides/fertilizers.

4. **Noise Pollution:** this is the excessive, unwanted, or disturbing sound that affects human health and environmental quality.

- *Sources of noise pollution:*
- Loud music
- vehicle horns
- industrial machinery
- construction activities
- aircraft noise
- generators.

- **Examples and Interaction:** Provide local examples if possible. Ask students to identify types of pollution they see in their community.

Evaluation (5 mins):

- Ask students to define pollution.
- Call on students to name the four types of pollution discussed.
- For each type, ask for one source ("Give one cause of air pollution").

Summary/Conclusion (3 mins):

- Briefly review the definition and the four main types of pollution (Air, Water, Land, Noise) and their common sources. Emphasize that pollution harms our environment.

Assignment (2 mins):

- Observe your surroundings on your way home or in your neighbourhood. Write down two examples of pollution you see and identify the type (Air, Water, Land, or Noise).

WEEK 3

Date: 13/05/2025

Period:

Duration: 40 Minutes

Topic: Environmental Pollution

Subtopic: Effects of pollution on the environment and personal health

Reference Materials: Recommended PHE Textbook(s), Health and Environmental websites (WHO, EPA).

Instructional Materials: Whiteboard/Marker, Pictures showing effects of pollution (smog, dead fish, eroded land, person coughing), Chart linking pollution types to effects.

Instructional Objectives: By the end of the lesson, students should be able to:

1. List two effects of air pollution on health and the environment.
2. List two effects of water pollution on health and the environment.
3. List two effects of land pollution on health and the environment.
4. List two effects of noise pollution on health.

Previous Knowledge: Students can define pollution and list its types and sources (from Week 2).

Introduction (5 mins):

- Quickly review the types of pollution learned last week (Air, Water, Land, Noise).
- Ask students: "What bad things do you think happen because of dirty air or dirty water?"
- Introduce the topic: The harmful effects of pollution.

BOARD SUMMARY (25 mins):

- **Effects of Air Pollution:**
 - *Environmental Effects:* Smog, acid rain (damages buildings, plants), damage to the ozone layer, contribution to climate change.
 - *Health Effects:* Respiratory problems (asthma, bronchitis), eye irritation, headaches, cardiovascular issues.
-
- **Effects of Water Pollution:**
 - *Environmental Effects:* Kills aquatic life (fish, plants), contaminates food sources, makes water bodies unsightly and smelly.
 - *Health Effects:* Waterborne diseases (cholera, typhoid, dysentery), skin diseases, at poisoning from contaminated fish/shellfish.
-
- **Effects of Land Pollution:**
 - *Environmental Effects:* Soil degradation (unfit for farming), loss of habitat for animals, groundwater contamination, visual blight.
 - *Health Effects:* Diseases spread by pests attracted to waste (rats, flies), poisoning from contaminated soil/produce, injuries from sharp objects in waste.
-
- **Effects of Noise Pollution:**
 - *Environmental Effects:* Disturbs wildlife behaviour.
 - *Health Effects:* Hearing loss/damage, sleep disturbances, stress, high blood pressure, reduced concentration.

all this effects Connects to environmental damage which often leads directly to health problems for humans and animals.

Evaluation (5 mins):

- Ask: "What is one health problem caused by air pollution?"
- Ask: "How does water pollution affect fish?"
- Ask: "Name one effect of noise pollution on people."
- Ask: "How can land pollution be harmful?"

Summary/Conclusion (3 mins):

- Summarize the key environmental and health effects associated with each major type of pollution. Reiterate that pollution has serious negative consequences.

Assignment (2 mins):

- Write a short paragraph explaining how one type of pollution (choose one: Air, Water, Land, or Noise) affects your community or personal health.

WEEK 4

Date: 19/05/2025

Period:

Duration: 40 Minutes

Topic: Environmental Pollution

Subtopic: Preventive measures against environmental pollution

Reference Materials: Recommended PHE Textbook(s), Environmental Agency websites, 3Rs resources.

Instructional Materials: Whiteboard/Marker, Chart explaining the 3Rs (Reduce, Reuse, Recycle), Pictures showing positive actions (tree planting, proper waste disposal, cycling).

Instructional Objectives: By the end of the lesson, students should be able to:

1. Explain the meaning of Reduce, Reuse, and Recycle (the 3Rs).
2. List at least three ways to prevent air pollution.
3. List at least three ways to prevent water pollution.
4. List at least three ways to prevent land pollution.
5. Suggest one way to reduce noise pollution.

Previous Knowledge: Students understand the types and harmful effects of pollution (from Weeks 2 & 3).

Introduction (5 mins):

- Review the negative effects of pollution discussed last week.
- Ask students: "Since pollution is so harmful, what can we do to stop it or reduce it?"
- Introduce the topic: Preventing Environmental Pollution.

BOARD SUMMARY (25 mins):

- **General Prevention Strategy; Meaning of the 3Rs:**

- **Reduce:** this is one of the general preservative strategies where by we use less of things that create waste (less plastic bags, turn off lights/water).
- **Reuse:** this is one of the general preservative strategies where by we use items again instead of throwing them away (reuse containers, repair items).
- **Recycle:** this is one of the general preservative strategies where by we process used materials into new products (paper, plastic bottles, cans). Explain the importance of sorting waste for recycling if applicable locally.

- **Specific Preventive Measures by Type:**

- **Air Pollution Prevention:**

the following are specific measures to prevent air pollution:

- i. Walk, cycle, or use public transport instead of private cars.
- ii. Avoid burning trash or leaves.
- iii. Conserve energy (turn off lights/appliances).
- iv. Plant trees (they absorb CO₂).
- v. Support laws for cleaner industries and vehicles.
- **Water Pollution Prevention:**

the following are specific measures to prevent water pollution:

- i. Dispose of trash properly, never in drains or water bodies.
- ii. Use less chemicals (pesticides, fertilizers) in gardens/farms.
- iii. Report oil or chemical spills immediately.
- iv. Conserve water (less wastewater).
- v. Proper sewage treatment.
-
- **Land Pollution Prevention:**

the following are specific measures to prevent land pollution;

- i. Practice the 3Rs diligently.
- ii. Proper waste disposal in designated bins/areas.
- iii. Composting organic waste (if feasible).
- iv. Avoid single-use plastics.
- v. Participate in community clean-up campaigns.
-
- **Noise Pollution Prevention:**

the following are specific measures to prevent noise pollution:

- i. Lower the volume on radios, TVs, music players.
- ii. Avoid unnecessary honking.
- iii. Use ear protection in noisy environments (factories, construction).
- iv. Plant trees/shrubs (they can absorb some sound).

○

●

- **Discussion: Individual and Collective Action:** if we gather everyone's small actions add up to make a big difference. Community efforts are also crucial.

Evaluation (5 mins):

- Ask students to explain what 'Reuse' means in the context of the 3Rs.
- Ask for two ways to prevent water pollution.
- Ask for two ways individuals can help reduce air pollution.
- Ask: "What can you do if music is playing too loudly?"

Summary/Conclusion (3 mins):

- Recap the 3Rs and specific preventive measures for each type of pollution. Emphasize the power of individual and community action in protecting the environment.

Assignment (2 mins):

- Create a simple poster with drawings or words showing one way to prevent pollution in the school or at home.

WEEK 5

Date: 27/05/2025

Period:

Duration: 40 Minutes

Topic: School Health Programme

Subtopic: Fresh approach to school health programme

Reference Materials: Recommended PHE Textbook(s), WHO resources on Health Promoting Schools, Articles on modern school health initiatives.

Instructional Materials: Whiteboard/Marker, Chart revisiting SHP components (from Week 1), Pictures/Examples of modern health initiatives (peer education, mental health support posters, school garden).

Instructional Objectives: By the end of the lesson, students should be able to:

1. Recall the core components of a School Health Program.
2. Identify at least three 'fresh' or modern approaches to improving school health.
3. Explain the potential benefit of one of these fresh approaches.
4. Suggest one new health idea for their own school.

Previous Knowledge: Students understand the basic components and importance of SHP (from Week 1).

Introduction (5 mins):

- Briefly review the components of SHP discussed in Week 1 (Healthful Environment, Services, Education, etc.).
- Ask students: "Are there ways we can make our school's health program even better or more up-to-date?" "What health issues are important for young people today besides just physical health?"
- Introduce the idea of 'fresh approaches' to SHP.

BOARD SUMMARY (25 mins):

- SHP: Quickly list the core components again to set the foundation.
- 'Fresh Approaches' / Modern Trends: our health needs evolve, and SHP needs to adapt.
 - **Mental and Emotional Health:** is how we can handle stress management, anti-bullying programs, access to counselling, promoting positive self-esteem.
 - **Student Involvement & Peer Education:** Training students to be health advocates or educators for their peers (on hygiene, nutrition, substance abuse prevention). Empowering student health clubs.
 - **Increased Focus on Healthy Lifestyles:** Beyond PE, integrating nutrition education, promoting healthy food choices in/around school, school gardens.
 - **Using Technology:** Health information apps, online resources, digital health records (where applicable/secure).
 - **Improved Sanitation & Hygiene Facilities:** Modern, clean, accessible toilets and handwashing stations with soap and water. Menstrual hygiene management support.
 - **Stronger Community & Family Links:** Workshops for parents, linking with local clinics, involving community leaders in school health initiatives.
 - **Comprehensive Sexuality Education (Age-Appropriate):** Providing accurate information on puberty, relationships, and reproductive health. (Adapt based on cultural context/school policy).
-
- **Benefits:** Explain how these approaches can lead to better overall well-being through our physical, mental, social health, it improved our academic performance, It equip students with skills for a healthy life. For example, mental health support can reduce stress and improve focus.
- **Student activity Brainstorm for our School:** Engage students: "Thinking about these ideas, what's one new thing we could try to improve health in *our* school?"

Evaluation (5 mins):

- Ask students to name two 'fresh' ideas for SHP.
- Ask: "Why is it important to include mental health in a school health program?"
- Ask students to share one idea they brainstormed for their school.

Summary/Conclusion (3 mins):

- Summarize that modern SHP goes beyond basics, incorporating mental health, student involvement, technology, and stronger community links to promote holistic well-being.

Assignment (2 mins):

- In small groups or individually, choose one 'fresh approach' discussed and write down 2-3 steps on how it could be implemented in your school.
-

WEEK 6

Date: 02/06/2025

Period:

Duration: 40 Minutes

Topic: Communicable and Non-communicable Diseases

Subtopic: Meaning of Communicable and Non-communicable Diseases

Reference Materials: Recommended PHE Textbook(s), WHO basic factsheets on diseases.

Instructional Materials: Whiteboard/Marker, Chart with definitions and comparison, Pictures illustrating spread (coughing, mosquito) vs. lifestyle factors (unhealthy food, smoking).

Instructional Objectives: By the end of the lesson, students should be able to:

1. Define 'Disease'.
2. Define Communicable Disease and give one example.
3. Define Non-Communicable Disease and give one example.
4. State the main difference between communicable and non-communicable diseases.

Previous Knowledge: Students have general awareness of common illnesses like cold, malaria, maybe diabetes.

Introduction (5 mins):

- Ask students: "How do you think you catch a cold or flu?" (From someone else, germs).
- Ask: "Do you think someone can 'catch' high blood pressure or asthma from another person?" (No).
- Introduce the idea that diseases can be grouped based on how they spread (or don't spread).

BOARD SUMMARY (25 mins):

- **Meaning of Disease:** disease is an illness or sickness characterized by specific signs and symptoms, affecting the body's normal functioning.
- **Meaning of Communicable Diseases:** these are diseases that CAN SPREAD from one person to another, or from animals or insects to people, or through the environment which comes from contaminated water or food. They are caused by pathogens also known as germs, pathogens like bacteria, viruses, fungi, or parasites. They are 'infectious' or 'contagious'.

Examples: Common cold, Flu, Malaria, Cholera, Measles, COVID-19, Tuberculosis (TB).

- **Meaning of Non-Communicable Diseases (NCDs):** these are diseases that generally CANNOT SPREAD directly from one person to another. They are often chronic. Chronic is long-lasting, and develop over time. the main

causes are often related to genetics, lifestyle factors like diet, physical activity, smoking, alcohol use, and environmental factors which is pollution.

Examples: Diabetes, Hypertension (High Blood Pressure), Asthma, Cancer, Heart Disease, Sickle Cell Anaemia (mention genetic basis).

- **Key Difference:** The primary difference is transmissibility whether it can be passed directly from one host to another.
- Communicable = Spreads;
- Non-communicable = Doesn't spread person-to-person directly.

Evaluation (5 mins):

- Ask students to define Communicable Disease in their own words.
- Ask students to define Non-Communicable Disease in their own words.
- Give examples (Malaria, Diabetes) and ask students to classify them.
- Ask: "What is the main difference between these two types of diseases?"

Summary/Conclusion (3 mins):

- Recap the definitions of communicable (spreadable, infectious) and non-communicable (non-spreadable, often chronic/lifestyle-related) diseases, emphasizing the key difference in how they are acquired.

Assignment (2 mins):

- List two diseases you have heard of. For each one, write whether you think it is Communicable or Non-Communicable and why.

WEEK 7

Date: 09/05/2025

Period:

Duration: 40 Minutes

Topic: Communicable and Non-communicable Diseases

Subtopic: Prevention of Communicable and Non-communicable Diseases

Reference Materials: Recommended PHE Textbook(s), Public health guidelines (Ministry of Health, WHO).

Instructional Materials: Whiteboard/Marker, Charts listing prevention methods for each type, Pictures illustrating prevention (handwashing, vaccination, healthy food plate, person exercising, 'no smoking' sign).

Instructional Objectives: By the end of the lesson, students should be able to:

1. List at least four methods for preventing communicable diseases.
2. List at least four methods for preventing non-communicable diseases.
3. Explain why prevention is important for both types of diseases.

Previous Knowledge: Students can define and differentiate between communicable and non-communicable diseases (from Week 6).

Introduction (5 mins):

- Review the definitions of communicable and non-communicable diseases.
- Ask students: "Is it better to get sick and then get treated, or to avoid getting sick in the first place? Why?"
- Introduce the topic: How to prevent these different types of diseases.

BOARD SUMMARY (25 mins):

- **Prevention of Communicable Diseases:** the following are ways we can break the chain of infection.
 1. **Hygiene:** Frequent handwashing with soap and water, covering coughs/sneezes, will slow the spread of communicable disease
 2. **Vaccination/Immunization:** Getting vaccinated by our health care personal to protect us against diseases like measles, polio, tetanus, TB (BCG), will stop the spread of communicable disease
 3. **Safe Water and Food:** Drinking clean water, washing fruits/vegetables before eating them, cooking food properly, will stop the spread of communicable disease.
 4. **Vector Control:** Using mosquito nets for malaria prevention, keeping surroundings clean to reduce breeding sites for insects/rodents, will stop the spread of communicable disease.
 5. **Isolation/Quarantine:** Staying home when sick to avoid spreading germs especially for highly contagious diseases, will stop the spread of communicable disease.
 6. **Safe Sex Practices:** this preventing the spread of STIs, and will stop the spread of such communicable disease
- **Prevention of Non-Communicable Diseases (NCDs):** the following are way we can focus on healthy lifestyle choices and managing risk factors.
 - a. **Healthy Diet:** Eating balanced meals with plenty of fruits, vegetables, whole grains; limiting sugar, salt, unhealthy fats.
 - b. **Regular Physical Activity:** Engaging in moderate exercise most days of the week (playing sports, walking, dancing).
 - c. **Avoid Tobacco Use:** Not smoking or using any tobacco products.
 - d. **Avoid Harmful Use of Alcohol:** Limiting or avoiding alcoholic beverages.
 - e. **Stress Management:** Finding healthy ways to cope with stress (hobbies, talking to someone, relaxation).
 - f. **Regular Health Check-ups:** Visiting a doctor/clinic for screenings (blood pressure, blood sugar, etc.), especially if there's a family history.
-
- **Importance of Prevention:**
 - It saves lives
 - It reduces suffering
 - It saves money on treatment,
 - It improves quality of life

- It helps communities thrive.

Evaluation (5 mins):

- Ask students to list two ways to prevent diseases like cholera or flu.
- Ask students to list two lifestyle choices that help prevent diseases like diabetes or heart disease.
- Ask: "Why is washing your hands important for preventing disease?"
- Ask: "Why is exercise important for preventing disease?"

Summary/Conclusion (3 mins):

- Summarize the key prevention strategies: hygiene, vaccination, safe food/water for communicable diseases; healthy diet, exercise, avoiding tobacco/alcohol for non-communicable diseases. Reiterate that prevention is key to good health.

Assignment (2 mins):

- Write down one thing you will start doing this week to help prevent communicable diseases AND one thing you will do to help prevent non-communicable diseases.

WEEK 8

Date: 16/06/2025

Period:

Duration: 40 Minutes

Topic: Communicable and Non-communicable Diseases

Subtopic: Examples of Communicable and Non-communicable Diseases

Reference Materials: Recommended PHE Textbook

Instructional Materials: Whiteboard/Marker, Chart listing examples under each category, Pictures or icons representing specific diseases (mosquito, lungs for TB, heart, insulin pen).

Instructional Objectives: By the end of the lesson, students should be able to:

1. Identify at least three examples of common communicable diseases.
2. Identify at least three examples of common non-communicable diseases.
3. Briefly state the cause or mode of transmission for one communicable disease example.
4. Briefly state a major risk factor for one non-communicable disease example.

Previous Knowledge: Students can define, differentiate, and list prevention methods for communicable and non-communicable diseases (from Weeks 6 & 7).

Introduction (5 mins):

- Review the definitions of communicable and non-communicable diseases quickly.
- Ask students to recall some examples they might have mentioned in previous lessons or assignments.
- State the objective: To learn more specific examples of each type of disease.

BOARD SUMMARY (25 mins):

- **Examples of Communicable Diseases**
- The following are some common examples, of communicable disease and their causes and spread.
 - **Malaria:** can be spread by infected mosquitoes (parasite).
 - **Common Cold / Influenza (Flu):** is spread by viruses through droplets from coughing/sneezing.
 - **Cholera:** is spread through contaminated water or food that has bacteria.
 - **Tuberculosis (TB):** is spread through the air from person to person, the bacteria affects lungs mainly.
 - **Measles:** is a highly contagious viral disease spread through air or direct contact.
 - **COVID-19:** this is a viral disease spread through respiratory droplets.
 - **Typhoid Fever:** is spread through contaminated food/water that has bacteria.
-
- **Examples of Non-Communicable Diseases (NCDs):** the following are some common examples, and key risk factors, nature.
 - **Hypertension (High Blood Pressure):** the risk factors include diet with high salt, lack of exercise, obesity, genetics, stress.
 - **Type 2 Diabetes:** Risk factors include obesity, poor diet with high sugar, lack of exercise, genetics. This is different from Type 1 Diabetes.
 - **Asthma:** this is a chronic respiratory disease, what triggers it are allergens like dust, pollen, pollution, exercise, stress. (Not caused by lifestyle but managed by it).
 - **Cancer:** this is an uncontrolled cell growth; the risk factors vary by type like smoking for lung cancer, diet, genetics, infections for others.
 - **Heart Disease (Cardiovascular Disease):** this includes heart attacks, strokes. The risk factors are similar to hypertension and diabetes which are diet, smoking, inactivity.
 - **Sickle Cell Disease:** these are inherited genetic blood disorders. It's genetic, not lifestyle-caused, but falls under NCD category.

Interactive Classification: Mention a disease and ask students if it's communicable or non-communicable and why.

Evaluation (5 mins):

- Ask students to name two communicable diseases.
- Ask students to name two non-communicable diseases.
- Ask: "How is Malaria spread?"
- Ask: "What is one lifestyle factor that can increase the risk of Type 2 Diabetes?"

Summary/Conclusion (3 mins):

- Recap the list of examples provided for both communicable and non-communicable diseases. Reinforce the link between the type of disease and its cause/spread or risk factors.

Assignment (2 mins):

- Choose one communicable disease AND one non-communicable disease from the list discussed. Find out and write down one main symptom for each.

WEEK 9

Date: 23/06/2025

Period:

Duration: 40 Minutes

Topic: Practical

Subtopic: Handwashing Techniques and Health Poster Design

Practical on Handwashing Techniques

Reference Materials: Handwashing guidelines, Soap, Water source/basin, Clean towels/paper towels.

Instructional Materials: Soap, Running water or bucket with tap/ jug , Basin (if no running water), Clean towels or paper towels, Chart showing steps of handwashing.

Instructional Objectives: By the end of the lesson, students should be able to:

1. State the importance of proper handwashing in disease prevention.
2. List the key Steps of effective handwashing.
3. Demonstrate the correct technique for washing hands with soap and water.

Previous Knowledge: Students know hygiene is important for preventing communicable diseases.

Introduction (10 mins):

- Review why handwashing is crucial (removes germs that cause communicable diseases - link to Weeks 6, 7, 8).
- Ask: "When are the most important times to wash your hands?" (Before eating, after using the toilet, after coughing/sneezing, after touching animals/garbage).
- Explain that *how* you wash your hands matters.

Demonstration (30 mins):

- **Step 1: Explain the step (Use Chart):**
 1. Wet hands with clean running water.
 2. Apply enough soap to cover all hand surfaces.
 3. Rub hands palm to palm.
 4. Right palm over left dorsum (back of hand) with interlaced fingers and vice versa.
 5. Palm to palm with fingers interlaced.
 6. Backs of fingers to opposing palms with fingers interlocked.
 7. Rotational rubbing of left thumb clasped in right palm and vice versa.
 8. Rotational rubbing, backwards and forwards with clasped fingers of right hand in left palm and vice versa.
 9. Rinse hands thoroughly with running water.
 10. Dry hands thoroughly with a single-use towel or air dryer.

11. Use towel to turn off tap (if applicable).

-
- **Step 2: Demonstrate the Technique:** Teacher demonstrates the full process slowly, emphasizing rubbing all surfaces for at least 20 seconds (sing "Happy Birthday" twice).
- **Step 3: Supervised Practice:** Students practice the technique one by one or in small groups at the designated washing station(s). Teacher observes and provides feedback.

Evaluation (30 mins):

- Observe each student (or a sample) demonstrating the handwashing technique. Use a simple checklist for key step.
- Ask students verbally to recall 2-3 key step or critical times for handwashing.

Summary/Conclusion (5 mins):

- Recap the importance of the technique demonstrated. Encourage students to practice it correctly every time they wash their hands at school and home.

Assignment (5 mins):

- Teach a family member the correct handwashing step you learned today. Be ready to share next class if they learned it. OR Draw the step of handwashing.

WEEK 10

Date: 30/05/2025

Period:

Duration: 40 Minutes

Topic: Revision

Subtopic: Review of Third Term's Work (Weeks 1-9)

Reference Materials: All previous lesson notes, Recommended PHE Textbook(s).

Instructional Materials: Whiteboard/Marker, Summary charts from previous lessons, Prepared revision questions (optional).

Instructional Objectives: By the end of the lesson, students should be able to:

1. Recall key definitions and concepts covered during the term.
2. Answer questions related to School Health Programs, Pollution, and Diseases.
3. Identify any areas they need to focus on for the upcoming examination.

Previous Knowledge: Students have covered all topics from Week 1 to Week 9.

Introduction (5 mins):

- Explain the purpose of the lesson: To review the term's work in preparation for the examination.
- Outline the topics covered: SHP, Pollution (types, effects, prevention), Communicable & Non-communicable

diseases (meaning, prevention, examples), Practical skills.

- Encourage students to ask questions about anything they are unsure of.

Activity (30 mins):

- **Method 1: Q&A Session:** Teacher asks questions covering all topics, calling on different students. Start with definitions, then move to listing, explaining, and applying concepts.
 - *Example Qs:* Define SHP. List 3 components. What is air pollution? Give one effect. How can we prevent water pollution? What's the difference between communicable and NCDs? Give an example of each. How do you prevent malaria? What lifestyle change helps prevent diabetes? Recall Steps for practical skill.
-
- **Method 2: Quick Quiz:** Give students a short written quiz with mixed question types (multiple choice, fill-in-the-blanks, short answers) covering key areas. Review answers together.
- **Method 3: Topic Summaries:** Divide class into groups, assign each group a major topic (SHP, Pollution, Diseases). Give them time to create a quick summary/mind map on a large sheet or section of the board, then present key points to the class.
- **Clarify Doubts:** Address any questions students raise during the revision. Re-explain complex concepts if needed.

Evaluation (Ongoing):

- Assess student participation and correctness of answers during Q&A or actives.
- Review quiz results to identify common areas of difficulty.

Summary/Conclusion (5 mins):

- Briefly highlight the main topics reviewed.
- Advise students on how to study effectively (review notes, textbook, practice questions).
- Remind them of the examination date/format if known.

Assignment:

- Study all notes and relevant textbook chapters for the upcoming examination. Attempt any end-of-chapter review questions in the textbook.
-

WEEK 11

PHYSICAL AND HEALTH EDUCATION EXAMINATION

CLASS: BASIC EIGHT TULIP

TERM: THIRD TERM

SUBJECT: PHYSICAL AND HEALTH EDUCATION

SECTION A: THEORY (Answer ALL questions)

1. Define School Health Programme (SHP) and list five essential components.
2. Explain four major types of environmental pollution and state one common source for each type.
3. Discuss three negative effects of air pollution on human health and two negative effects on the environment.
4. What are the '3Rs' in waste management? Explain each 'R' briefly.
5. Outline three 'fresh' or modern approaches that can improve a School Health Programme beyond the traditional components.
6. Clearly differentiate between communicable and non-communicable diseases. Give two specific examples for each category.
7. List five distinct methods for preventing the spread of communicable diseases.
8. Describe four lifestyle choices that can help prevent the development of non-communicable diseases.
9. Choose ONE communicable disease (Malaria, Cholera) and ONE non-communicable disease (Hypertension, Type 2 Diabetes). For each disease, state:
 - a. Its main cause or mode of transmission for communicable or a major risk factor for non-communicable.
 - b. One specific preventive measure.
- 10.
11. Why is proper handwashing technique important, especially in a school environment? List five critical times when hands should be washed.

SECTION B: OBJECTIVE QUESTIONS (Answer ALL questions)

Choose the most appropriate option from A to E.

- | | |
|---|---|
| 1. The organised activities aimed at promoting and protecting the health of students and staff within the school environment is called:
(A) School Teaching Programme
(B) School Health Programme
(C) School Feeding Programme
(D) School Sports Programme
(E) School Cleaning Programme | (B) Healthful School Environment
(C) School Disciplinary Committee
(D) School Health Education
(E) Physical Education |
| 2. Which of these is NOT a major component of a School Health Programme?
(A) School Health Services | 3. Providing First Aid to injured students falls under which component of SHP?
(A) School Nutrition Services
(B) Healthful School Environment
(C) School Health Services
(D) Family & Community Involvement
(E) Physical Education |

4. A clean water supply and proper toilet facilities in school contribute to a:
 - (A) School Health Education
 - (B) School Nutrition Service
 - (C) Healthful School Environment
 - (D) School Counselling Service
 - (E) Staff Health Promotion
5. Teaching students about hygiene, nutrition, and disease prevention is part of:
 - (A) School Health Services
 - (B) School Health Education
 - (C) Healthful School Environment
 - (D) Physical Education
 - (E) School Nutrition Services
6. The overall well-being of an individual, encompassing physical, mental, and social aspects is:
 - (A) Community Health
 - (B) School Health
 - (C) Personal Health
 - (D) Environmental Health
 - (E) National Health
7. The health status of people living together in a specific area is known as:
 - (A) Personal Health
 - (B) School Health
 - (C) Environmental Health
 - (D) Community Health
 - (E) Occupational Health
8. The introduction of harmful substances into the environment is called:
 - (A) Purification
 - (B) Sanitation
 - (C) Pollution
 - (D) Conservation
 - (E) Fermentation
9. Which of these is a major type of environmental pollution?
 - (A) Soil Erosion
 - (B) Deforestation
 - (C) Air Pollution
 - (D) Overpopulation
 - (E) Desertification
10. Smoke from factories and exhaust fumes from vehicles primarily cause:
 - (A) Water Pollution
 - (B) Noise Pollution
 - (C) Land Pollution
 - (D) Air Pollution
 - (E) Thermal Pollution
11. Dumping sewage and industrial waste into rivers causes:
 - (A) Air Pollution
 - (B) Noise Pollution
 - (C) Water Pollution
 - (D) Land Pollution
 - (E) Visual Pollution
12. Improper disposal of solid waste like plastics and metals leads mainly to:
 - (A) Air Pollution
 - (B) Noise Pollution
 - (C) Water Pollution
 - (D) Land Pollution
 - (E) Radioactive Pollution
13. Excessive and unwanted sound in the environment is known as:
 - (A) Air Pollution
 - (B) Noise Pollution
 - (C) Water Pollution
 - (D) Land Pollution
 - (E) Light Pollution
14. A common source of noise pollution is:
 - (A) Planting trees
 - (B) Flowing river
 - (C) Loud music systems
 - (D) Rainfall
 - (E) Wind blowing
15. Which is NOT a primary source of land pollution?
 - (A) Domestic refuse
 - (B) Industrial waste dumping
 - (C) Excessive use of pesticides
 - (D) Vehicle exhaust fumes
 - (E) Deforestation leading to soil degradation
16. Smog, which reduces visibility in cities, is a result of:
 - (A) Water Pollution
 - (B) Noise Pollution
 - (C) Air Pollution
 - (D) Land Pollution

- (E) Thermal Pollution
17. Acid rain, caused by air pollutants, damages:
- (A) Only aquatic life
 - (B) Only human skin
 - (C) Buildings, forests, and lakes
 - (D) Only underground water
 - (E) Only desert areas
18. Respiratory diseases like asthma and bronchitis can be aggravated by:
- (A) Clean Water
 - (B) Air Pollution
 - (C) Noise Pollution
 - (D) Healthy Diet
 - (E) Regular Exercise
19. Drinking water contaminated with sewage can lead to diseases like:
- (A) Asthma
 - (B) Cholera
 - (C) Hearing loss
 - (D) Lung cancer
 - (E) Diabetes
20. Water pollution can harm aquatic life primarily by:
- (A) Making the water too loud
 - (B) Reducing oxygen levels and introducing toxins
 - (C) Making the water too bright
 - (D) Increasing the water temperature drastically
 - (E) Causing soil erosion nearby
21. Land pollution can lead to the contamination of:
- (A) Air conditioners
 - (B) Rain clouds
 - (C) Groundwater
 - (D) Stratosphere
 - (E) Ocean currents
22. Pests like rats and flies are often attracted to areas with high:
- (A) Noise Pollution
 - (B) Air Pollution
 - (C) Light Pollution
 - (D) Land Pollution (improper waste)
 - (E) Water purity
23. Hearing loss, stress, and sleep disturbances are potential health effects of:
- (A) Air Pollution
 - (B) Water Pollution
 - (C) Land Pollution
 - (D) Noise Pollution
 - (E) Soil Erosion
24. Which of these actions helps prevent air pollution?
- (A) Burning trash in the open
 - (B) Using private cars frequently
 - (C) Planting trees
 - (D) Cutting down forests
 - (E) Using aerosols excessively
25. The '3Rs' strategy for waste management stands for:
- (A) Read, Write, Remember
 - (B) Run, Rest, Repeat
 - (C) Reduce, Reuse, Recycle
 - (D) Repair, Replace, Refuse
 - (E) Road, River, Rail
26. Using a cloth bag for shopping instead of taking plastic bags is an example of:
- (A) Recycling
 - (B) Reducing
 - (C) Reusing
 - (D) Refusing
 - (E) Repairing
27. Collecting used paper, plastic, and glass to be made into new products is called:
- (A) Reducing
 - (B) Reusing
 - (C) Recycling
 - (D) Replanting
 - (E) Repairing
28. A key way to prevent water pollution from domestic sources is:
- (A) Pouring oil down the drain
 - (B) Throwing garbage into rivers
 - (C) Proper sewage treatment and disposal
 - (D) Using excessive fertilizers near water bodies
 - (E) Washing cars in the river
29. Which activity primarily helps in preventing land pollution?
- (A) Using loud speakers

- (B) Driving cars less
 - (C) Proper waste disposal in bins
 - (D) Filtering factory smoke
 - (E) Boiling drinking water
30. One way to reduce noise pollution at a personal level is:
- (A) Playing music very loudly
 - (B) Honking car horns unnecessarily
 - (C) Lowering the volume on electronic devices
 - (D) Using noisy machinery at night
 - (E) Shouting frequently
31. Conserving electricity helps reduce air pollution because:
- (A) Less noise is produced
 - (B) Less water is used
 - (C) Power plants may burn less fuel
 - (D) Fewer trees are cut
 - (E) It reduces land waste
32. Modern approaches to SHP often include a greater focus on:
- (A) Punishment for bad behaviour
 - (B) Mental and emotional well-being
 - (C) Only competitive sports
 - (D) Academic subjects only
 - (E) School building maintenance only
33. Training students to educate their peers on health issues is called:
- (A) Staff Health Promotion
 - (B) Peer Education
 - (C) Community Involvement
 - (D) Health Screening
 - (E) Nutrition Service
34. Incorporating stress management techniques in school programmes addresses:
- (A) Nutritional Health
 - (B) Physical Health only
 - (C) Environmental Health
 - (D) Mental and Emotional Health
 - (E) Communicable Diseases only
35. A 'fresh approach' to SHP might involve using technology for:
- (A) Banning mobile phones
 - (B) Spreading rumours
 - (C) Accessing health information and resources
 - (D) Increasing noise pollution
 - (E) Promoting unhealthy diets
36. Ensuring clean and accessible toilets with handwashing facilities is part of which 'fresh approach' focus?
- (A) Peer Education
 - (B) Mental Health
 - (C) Improved Sanitation and Hygiene
 - (D) Technology Integration
 - (E) Community Links
37. An illness or sickness that affects the body's normal functioning is a:
- (A) Programme
 - (B) Component
 - (C) Disease
 - (D) Prevention
 - (E) Pollution
38. Diseases that can spread from one person to another are called:
- (A) Non-communicable diseases
 - (B) Chronic diseases
 - (C) Lifestyle diseases
 - (D) Communicable diseases
 - (E) Genetic diseases
39. Diseases that generally cannot be spread directly from person to person are:
- (A) Communicable diseases
 - (B) Infectious diseases
 - (C) Contagious diseases
 - (D) Non-communicable diseases
 - (E) Vector-borne diseases
40. The common cold and influenza (flu) are examples of:
- (A) Non-communicable diseases
 - (B) Communicable diseases
 - (C) Genetic disorders
 - (D) Nutritional deficiencies
 - (E) Mental illnesses
41. Diabetes and Hypertension (High Blood Pressure) are examples of:
- (A) Communicable diseases
 - (B) Infectious diseases
 - (C) Non-communicable diseases
 - (D) Parasitic diseases
 - (E) Viral diseases

42. Communicable diseases are typically caused by:
- (A) Poor lifestyle choices only
 - (B) Genetic inheritance only
 - (C) Pathogens (germs) like bacteria and viruses
 - (D) Environmental pollution only
 - (E) Old age
43. Non-communicable diseases are often linked to:
- (A) Insect bites
 - (B) Contaminated water
 - (C) Lifestyle factors, genetics, and environment
 - (D) Sharing towels
 - (E) Coughing and sneezing
44. The main difference between communicable and non-communicable diseases relates to:
- (A) How long they last
 - (B) Whether they affect children or adults
 - (C) Whether they can be transmitted (spread)
 - (D) Which part of the body they affect
 - (E) The cost of treatment
45. Washing hands frequently with soap and water helps prevent the spread of:
- (A) Only non-communicable diseases
 - (B) Only genetic disorders
 - (C) Many communicable diseases
 - (D) Only lifestyle diseases
 - (E) Only injuries
46. Vaccination (Immunization) is a primary preventive measure against:
- (A) Diseases like Diabetes and Heart Disease
 - (B) Many communicable diseases like Measles and Polio
 - (C) All types of cancer
 - (D) Noise-induced hearing loss
 - (E) Land pollution effects
47. Ensuring access to clean drinking water prevents diseases like:
- (A) Asthma
 - (B) Hypertension
 - (C) Cholera and Typhoid
 - (D) Lung Cancer
 - (E) Sickle Cell Anaemia
48. Using insecticide-treated mosquito nets helps prevent:
- (A) Flu
 - (B) Diabetes
 - (C) Malaria
 - (D) Tuberculosis
 - (E) Measles
49. Staying home when sick with a contagious illness is an example of:
- (A) Vector Control
 - (B) Vaccination
 - (C) Isolation/Quarantine
 - (D) Healthy Diet
 - (E) Physical Activity
50. Eating a balanced diet rich in fruits and vegetables helps prevent:
- (A) Only communicable diseases
 - (B) Many non-communicable diseases
 - (C) Only infectious diseases
 - (D) Only injuries
 - (E) Only waterborne diseases
51. Regular physical activity is a key preventive measure for:
- (A) Flu and Common Cold
 - (B) Malaria and Cholera
 - (C) Heart disease, Diabetes, and Obesity
 - (D) Measles and Mumps
 - (E) Tuberculosis
52. Avoiding tobacco use (smoking) significantly reduces the risk of:
- (A) Cholera
 - (B) Malaria
 - (C) Lung Cancer and Heart Disease
 - (D) Common Cold
 - (E) Typhoid Fever
53. Managing stress through healthy coping mechanisms contributes to preventing:
- (A) Measles
 - (B) Malaria
 - (C) Some non-communicable diseases like Hypertension
 - (D) Cholera
 - (E) Typhoid
54. Regular health check-ups are important for early detection mainly of:
- (A) Common Cold
 - (B) Flu

- (C) Non-communicable diseases
(D) Malaria
(E) Acute infections
55. Which of the following is a communicable disease?
(A) Asthma
(B) Diabetes
(C) Tuberculosis (TB)
(D) Hypertension
(E) Cancer
56. Which of the following is a non-communicable disease?
(A) Malaria
(B) Measles
(C) Cholera
(D) Asthma
(E) Influenza (Flu)
57. Malaria is spread through:
(A) Coughing or sneezing
(B) Contaminated food or water
(C) The bite of an infected mosquito
(D) Direct skin contact
(E) Inherited genes
58. Cholera is primarily spread through:
(A) Air droplets
(B) Mosquito bites
(C) Contaminated water or food
(D) Sharing clothes
(E) Animal scratches
59. Tuberculosis (TB) is a bacterial infection most commonly affecting the:
(A) Heart
(B) Liver
(C) Lungs
(D) Kidneys
(E) Skin
60. A major risk factor for developing Type 2 Diabetes is:
(A) Frequent handwashing
(B) Vaccination
(C) Obesity and poor diet
(D) Using mosquito nets
(E) Drinking clean water
61. Hypertension is the medical term for:
(A) Low blood sugar
(B) High blood pressure
(C) High cholesterol
(D) Low body temperature
(E) Rapid heart rate
62. Asthma is a chronic disease affecting the:
(A) Digestive system
(B) Circulatory system
(C) Respiratory system (airways)
(D) Nervous system
(E) Skeletal system
63. Sickle Cell Disease is an example of a(n):
(A) Disease spread by insects
(B) Disease caused by poor hygiene
(C) Inherited genetic disorder (NCD category)
(D) Disease caused by viruses
(E) Disease caused by bacteria
64. Proper handwashing technique involves using soap and rubbing hands for at least:
(A) 5 seconds
(B) 10 seconds
(C) 20 seconds
(D) 1 minute
(E) 2 minutes
65. A critical time to wash hands is:
(A) Before watching television
(B) After using the toilet
(C) After reading a book
(D) Before going outside to play
(E) During sleep
66. Which part of the hands is often missed during handwashing?
(A) Palms
(B) Back of hands and between fingers
(C) Only the fingertips
(D) Only the wrists
(E) Forearms
67. The purpose of using soap during handwashing is to:
(A) Make hands smell nice only
(B) Help lift dirt and germs off the skin
(C) Make the water colder
(D) Dry the hands faster
(E) Colour the water
68. Which component of SHP deals with checking students' vision and hearing?

- (A) Health Education
 - (B) Health Services
 - (C) Nutrition Services
 - (D) Physical Education
 - (E) Healthful Environment
69. Deforestation contributes primarily to which type of pollution?
- (A) Noise Pollution
 - (B) Water Pollution
 - (C) Land Pollution (soil erosion) and affects Air Quality
 - (D) Only Light Pollution
 - (E) Only Thermal Pollution
70. Reducing the use of single-use plastics helps prevent:
- (A) Noise pollution
 - (B) Air pollution directly
 - (C) Land and Water pollution
 - (D) Ozone layer depletion
 - (E) Acid rain
71. Peer pressure related to smoking or drinking alcohol is a risk factor for:
- (A) Malaria
 - (B) Cholera
 - (C) Non-communicable diseases
 - (D) Measles
 - (E) Tuberculosis
72. A school garden project could be part of which SHP component or fresh approach?
- (A) Only Health Services
 - (B) Only Staff Health Promotion
 - (C) Nutrition Services and Health Education
 - (D) Only Counselling Services
 - (E) Only Physical Education Equipment
73. Covering your mouth and nose when coughing or sneezing helps prevent the spread of:
- (A) NCDs like diabetes
 - (B) Genetic disorders
 - (C) Communicable respiratory diseases
 - (D) Waterborne diseases
 - (E) Foodborne illnesses
74. Which disease is NOT typically prevented by vaccination?
- (A) Measles
 - (B) Polio
 - (C) Tetanus
 - (D) Hypertension
 - (E) Tuberculosis (BCG vaccine offers some protection)
75. Composting organic waste is a method to reduce:
- (A) Air pollution
 - (B) Noise pollution
 - (C) Land pollution
 - (D) Water pollution
 - (E) Light pollution
76. Which factor is LEAST likely to be a direct cause of a communicable disease?
- (A) Virus
 - (B) Bacterium
 - (C) Fungus
 - (D) Genetic Mutation
 - (E) Parasite
77. Promoting mental health awareness in schools aims to:
- (A) Increase physical fitness only
 - (B) Reduce stigma and encourage help-seeking
 - (C) Improve nutrition only
 - (D) Prevent all communicable diseases
 - (E) Clean the school environment
78. An example of 'Reusing' would be:
- (A) Buying fewer items
 - (B) Melting down plastic bottles to make chairs
 - (C) Using an old jar to store pencils
 - (D) Throwing away a broken toy
 - (E) Composting fruit peels
79. Which environmental issue is MOST directly linked to the burning of fossil fuels (coal, oil, gas)?
- (A) Water pollution from sewage
 - (B) Noise pollution from traffic
 - (C) Air pollution and climate change
 - (D) Land pollution from plastic waste
 - (E) Soil erosion from farming
80. The overall goal of learning about PHE topics like SHP, pollution, and diseases is to:
- (A) Pass the examination only
 - (B) Become a professional athlete
 - (C) Promote personal, community, and

ANSWER KEY (OBJECTIVE)

1. (B) School Health Programme
2. (C) School Disciplinary Committee
3. (C) School Health Services
4. (C) Healthful School Environment
5. (B) School Health Education
6. (C) Personal Health
7. (D) Community Health
8. (C) Pollution
9. (C) Air Pollution
10. (D) Air Pollution
11. (C) Water Pollution
12. (D) Land Pollution
13. (B) Noise Pollution
14. (C) Loud music systems
15. (D) Vehicle exhaust fumes
16. (C) Air Pollution
17. (C) Buildings, forests, and lakes
18. (B) Air Pollution
19. (B) Cholera
20. (B) Reducing oxygen levels and introducing toxins
21. (C) Groundwater
22. (D) Land Pollution (improper waste)
23. (D) Noise Pollution
24. (C) Planting trees
25. (C) Reduce, Reuse, Recycle
26. (B) Reducing (also an element of reuse by using the bag repeatedly)
27. (C) Recycling
28. (C) Proper sewage treatment and disposal
29. (C) Proper waste disposal in bins
30. (C) Lowering the volume on electronic devices
31. (C) Power plants may burn less fuel
32. (B) Mental and emotional well-being
33. (B) Peer Education
34. (D) Mental and Emotional Health
35. (C) Accessing health information and resources
36. (C) Improved Sanitation and Hygiene
37. (C) Disease
38. (D) Communicable diseases
39. (D) Non-communicable diseases
40. (B) Communicable diseases
41. (C) Non-communicable diseases
42. (C) Pathogens (germs) like bacteria and viruses
43. (C) Lifestyle factors, genetics, and environment
44. (C) Whether they can be transmitted (spread)
45. (C) Many communicable diseases
46. (B) Many communicable diseases like Measles and Polio
47. (C) Cholera and Typhoid
48. (C) Malaria
49. (C) Isolation/Quarantine
50. (B) Many non-communicable diseases
51. (C) Heart disease, Diabetes, and Obesity
52. (C) Lung Cancer and Heart Disease
53. (C) Some non-communicable diseases like Hypertension
54. (C) Non-communicable diseases
55. (C) Tuberculosis (TB)
56. (D) Asthma
57. (C) The bite of an infected mosquito
58. (C) Contaminated water or food
59. (C) Lungs
60. (C) Obesity and poor diet
61. (B) High blood pressure
62. (C) Respiratory system (airways)
63. (C) Inherited genetic disorder (NCD category)
64. (C) 20 seconds
65. (B) After using the toilet
66. (B) Back of hands and between fingers
67. (B) Help lift dirt and germs off the skin
68. (B) Health Services
69. (C) Land Pollution (soil erosion) and affects Air Quality
70. (C) Land and Water pollution
71. (C) Non-communicable diseases
72. (C) Nutrition Services and Health Education

73. (C) Communicable respiratory diseases
74. (D) Hypertension
75. (C) Land pollution
76. (D) Genetic Mutation
77. (B) Reduce stigma and encourage help-seeking
79. (C) Air pollution and climate change
80. (C) Promote personal, community, and environmental health
